2.

以下是我的程式碼，電腦跑不動了所以沒有結果，還請見諒。

```
import rclpy

from rclpy.node import Node

from sensor_msgs.msg import CompressedImage

import std_msgs.msg

class ImageSubscriber(Node):

    def __init__(self):

        super().__init__('image_subscriber')

        self.subscription = self.create_subscription(

            CompressedImage,

            '/camera/color/image_raw/compressed',

            self.image_callback,

            10

        )

        self.subscription  # 防止未使用的變數警告
```

```
def image_callback(self, msg):

    # 提取時間戳並進行日誌輸出

    timestamp = msg.header.stamp.sec # 獲取時間戳的秒數

    self.get_logger().info(f"Received Image at timestamp: {timestamp}, notice:
Color image received.")

def main(args=None):

    rclpy.init(args=args)

    # 創建並啟動節點

    image_subscriber = ImageSubscriber()

    # 讓節點持續運行並處理回調

    rclpy.spin(image_subscriber)

    # 清理並關閉節點

    image_subscriber.destroy_node()

    rclpy.shutdown()

if __name__ == '__main__':

    main()
```
